

Setting Up Roadshow Speakers for DJs (RCA Input)

When using the Roadshow Speakers (our large PA system), you may need to connect our DDJ-RX3s to the Yamaha MG06 desk (which controls all inputs and outputs as shown below).

The Desk:

The DDJ-RX3 uses an XLR and RCA output. Plug an RCA cable into the rear of the DJ decks and flow them over to the desk. Here, use an RCA to 1/4 jack cable (shown below) and connect to the RCA cables. Then plug the red RCA cable into the right, and white into the left.

Make sure the levels are off, turn the MG06 desk on and then see if you have levels. If you do – yay! Plug an XLR cable into both left and right output (top right in blue), and then into the relevant speaker. Make sure the speaker is off and volume on 0 before you do this.
